L'ORANGE GmbH, leader in manufacturing of fuel injection systems and in line with the LNOx maritime regulations, has released Pump Elements for use with LSFO.

At the moment we see the biggest demand in our area for the MAN L23/20(H) engines, therefore have built stock for this item in our warehouse.

The new type PYO-U872AV1 can replace the previous type PYO-U872 without any modification and can be used with both LS and conventional fuel.

The IMO-ID of both types is the same, dimensions are identical, the technical difference is the coated plunger of the new type.

More L'ORANGE news are coming out soon!
